

The Organic Ceramics Co

Product guide and Price List

About Us

What we do...

We design, build and plaster a range of venetian plaster furniture perfect for every home. Every piece of furniture is hand made from start to finish, ensuring the highest quality and attention to detail. As each piece is handmade no two pieces will ever be identical which ensures your item is completely unique.

What is Venetian Plaster...

Micro Cement is a hygienic, zero VOC and very durable product developed for commercial floor toppings. It has a high scratch resistance and reaches a very high MPA (measure of compressive strength) in a relatively short time. The micro cement we use has been developed in conjunction with high grade sealers to achieve a durable Venetian plastered finish.

Who are we...

We are a small locally owned and operated family business located in the Byron Bay region. We pride ourselves on using recycled and environmentally friendly materials to create the highest quality furniture as a light weight alternative to concrete furniture.

340mm

FINISH & material

Top consists of 5 layers of sandwiched and glued plywood and MDF with 5 layers of micro cement render at 3mm , and sealed with marine grade sealant.

Base /Legs: Concrete cylinder finished with 3mm micro cement render

Care and Maintenance

Micro cement is a versatile product and the maintenance and care is similar to that of natural stone and concrete, meaning periodic maintenance is required to maintain and ensure its long life.

Like any natural product, the tables require additional protection and precautions. These surfaces, though sealed may be damaged by liquids or food if not attended to properly.

Avoid placing hot objects, objects filled with liquids directly onto the table without a coaster or mat.

Remove any liquids/spillages from the surface as quickly as possible.

Use felt to cover the bottom of any ornaments or vase to avoid scratches or indentations.

We recommend regular wiping with water and/or PH neutral soaps – we use a natural glass cleaner.

Spills should be cleaned promptly to avoid staining.

Avoid using acidic or abrasive cleaning material which may weaken the sealers' protection.

Buffing tools are supplied with the tables.

Suitable for indoor use only (unless otherwise specified).
